**REGION IV  
CERCLA REMOVAL ACTION**

**FACTS SHEET**

**SITE:** Montreal Court Drum Site

**SIZE:** One-half acre.

**LOCATION:** Tucker, DeKalb County, Georgia.

**APPROVAL DATE:** May 4, 1990.

**PROJECT DATES:** January 10, 1990 through October 4, 1990.

**DESCRIPTION:** Montreal Court is located in an industrial area of DeKalb County, Georgia. The one-half acre site was leased by the owner to a leasee who used the property to store over thirty drums of hazardous materials.

**HAZARDOUS MATERIALS:** Flammable liquids and solids, oxidizers, volatiles, petroleum products, heavy metals, and chlorinated organics.

**QUANTITIES REMOVED:** 3165 Gallons of Waste Flammable Liquids.

**ON-SCENE COORDINATOR:** Steve Spurlin.

**REMOVAL CONTRACTOR:** O.H. Materials, Inc., Findlay, Ohio.

**DISPOSAL LOCATIONS:** MKC Enterprises, Incorporated Doraville, Georgia

**COMMENTS:** At the time of this removal, the Environmental Protection Agency's National Enforcement Investigation Center (NEIC) was investigating the site and the responsible party(ies).

## **I. INTRODUCTION**

### **A. Site Background/Site History**

The property located on Montreal Court in Tucker, DeKalb County, Georgia is located in an industrial area of the county. The property was leased by the owner to an individual who used the property as a drum storage area. As a result of the property owner's complaints and inquiries, the Environmental Protection Agency's National Enforcement Investigation Center (NEIC) was investigating the site.

An initial site investigation was performed by TAT in January 1990, which revealed the presence of thirty-five 55-gallon drums on site. (TAT Document #04-F-03861). The majority of the drums were stored on pallets and all of the drums showed signs of weathering. Many of the drums were open top drums and six were empty. A few of the drums were stored on their sides and some of the drums had leaked as was evidenced by the discolored soil in the drum storage area. While on site, TAT created drum #36 by depositing a small amount of heavily contaminated soil in the drum. The soil appeared to have been contaminated by the leaking of drum #29, which was empty and laying on it's side. Sampling of the drums by TAT revealed the presence of a variety of materials in the drums, including heavy metals, volatiles, flammables, oxidizers and chlorinated organics. In conjunction with the on-going criminal investigation of the responsible party(ies), the EPA Emergency Response Branch initiated

a fund-lead removal action in May 1990, to curtail the imminent threat from the hazardous materials present on the site.

## **II. PHASE I - SITE CHARACTERIZATION**

### **A. Site Investigation**

On 23 May 1990, EPA mobilized ERCS and TAT to Montreal Court Drum Site to re-sample the drums for compatibility testing and to establish waste streams for disposal. Upon completion of drum inventorying, ERCS sampled all of the drums, including drum #36. Due to the fact that six of the drums were empty, ERCS completed the sampling of only thirty drums. (Attachment D - Photographs). The samples were analyzed for disposal parameters by Ecotek Laboratory Services Incorporated in Atlanta, Georgia. (Attachment C - Analytical Data).

## **III. PHASE II - REMOVAL ACTION**

### **A. Removal, Transportation and Disposal of Waste Streams**

From the initial field characterization and compatibility analysis performed on the samples taken by TAT in January 1990, it was determined which drums contained hazardous materials. Only the twelve drums containing hazardous materials were removed from the site.

On 30 May 1990, EPA mobilized ERCS and TAT to the site to overpack nine drums that were in one compatible waste stream, according to the analytical testing. This waste stream contained the flammable

liquids, the oxidizers and the hexane soluble liquids. The drums that were in this particular waste stream, or Wastestream 1, were drums # 3, 4, 6, 7, 9, 10, 24, 32 and 33. During this particular site visit, the OSC and TAT found one 30-gallon drum of a liquid that appeared to be waste oil on the site property, also. This drum had not previously been present on the site. This drum was numbered 38 and was sampled and overpacked along with the other nine drums. The analysis of the sample confirmed that the sample was a petroleum product.

On 6 July 1990, EPA mobilized ERCS and TAT to the site to monitor the removal of the nine drums which made up Wastestream 1. The removal of the nine drums was carried out by MKC Enterprises, Incorporated of Doraville, Georgia. Approximately 3000 gallons of waste flammable liquids were removed by MKC from the site on this individual day.

On 27 September 1990, EPA mobilized ERCS and TAT to the site to remove the remaining three hazardous drums. Unfortunately, due to miscommunication and confusion between the ERCS contractor and MKC Enterprises, Incorporated, the removal of the final two wastestreams was temporarily delayed.

On 4 October 1990, EPA mobilized ERCS and TAT to the site for the final removal process. ERCS overpacked drums #11 and #34, which contained approximately 110 gallons of waste flammable liquids with high levels of cadmium. These two drums, or Wastestream 2, were removed by MKC, also. In addition, drum #38, which contained

approximately 30 gallons of petroleum distillates was also removed by MKC during this visit. ERCS and TAT demobed from the site concluding the removal at Montreal Court Drum Site.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION IV

345 COURTLAND STREET, N.E.  
ATLANTA, GEORGIA 30365

ACTION MEMORANDUM

DATE: MAY 04 1990

SUBJECT: Removal Action Authorization for the Montreal Court Drum Site, Tucker, Georgia.

FROM: Steve Spurlin  
On-Scene Coordinator

TO: Patrick M. Tobin, Director  
Waste Management Division  
EPA Region IV

PURPOSE

This memorandum is for authorization to proceed with the removal action at the Montreal Court Drum Site in Tucker, Georgia. A significant threat to the public health and the environment exists at this time, and may worsen if response is delayed. The total cost of the project is \$100,315.

BACKGROUND

A. Site Setting/Description

The site is located at 1804 Montreal Court, Tucker, Georgia. The site is generally open field, with several small businesses, including a body shop, shipping company, and well-drilling operation located in close proximity.

In December 1989, representatives from the EPA Office of Criminal Investigation (OCI) requested the EPA Emergency Response & Removal Branch to respond to the site to investigate and identify any hazards associated with thirty-five (35) abandoned drums.

B. Quantity and Types of Substances Present

Thirty-five fifty-five gallon drums were found at the site on January 10, 1990. Technical Assistance Team (TAT) personnel under level B protection examined the drums and report that many drums were open top and in various stages of deterioration. TAT performed a site assessment that included drum sampling for compatibility analysis. Subsequently, when all drums were sampled the On-Scene Coordinator selected three drums to be resampled to be sent to the EPA Environmental Services Division laboratory for Target Compound List (TCL) analysis.

Several drums could not be sampled due to insufficient volumes in the drums or the material was solidified. Of the 35 total drums on-site; 26 were sampled; 2 could not be sampled; and 7 were empty. One drum was empty and had spilled its contents on the ground.

Sample analysis confirmed the presence of the following hazardous substances in the concentrations set forth:

<u>SUBSTANCE</u>	<u>LEVEL</u>
Toluene	17,021 ppm
Ethylbenzene	6,526 ppm
Tetrachloroethene	1,147 ppm
Total Xylenes	3,944 ppm
1,1,1-Trichloroethane	156 ppm
Phenol	1,300 ppm

C. The site is not on the NPL.

**THREAT**

A. Threat of Exposure to Public or the Environment

The site is in an unsecured open area. Due to the sites' close proximity to other businesses the potential exists for human exposure via direct contact with the material. Also, four drums contain flammable liquids which pose a potential fire and explosion hazard.

The site has no release containment. Should a release occur, soil, groundwater, and surface water could be adversely effected.

B. Evidence of Extent of Release

Several drums were open and could be discharging hazardous material when rainwater displaces the drum contents. One drum had spilled its contents on the ground. Also, when conducting a follow-up site visit to inspect the condition of the drums, EPA observed that another drum appeared to have leaked a small amount of an oily substance. The drums remain unprotected from environmental exposure and continued deterioration of their integrity through exposure will result in an increased chance of a release.

**C. Actions Taken to Abate Threat**

There have been no previous actions to abate the threat.

**D. Current Actions to Abate Threat**

There are no current actions to abate the threat posed by this site, and none are anticipated should this action be disapproved.

**ENFORCEMENT**

See Attachment I

**PROPOSED ACTIONS AND COSTS**

**A. Objectives of the Project**

The objectives of this project are to repackage, remove, and dispose of all drums found to contain hazardous substances at the Montreal Court site. The drums will be disposed of at an approved hazardous waste facility.

**B. Project Costs**

**Extramural Costs**

Cleanup Contractor Costs	\$72,500
TAT Costs	\$ 8,600
15% Contingency	<u>\$12,165</u>
 Total Extramural Costs	 \$93,265

**Intramural Costs**

Direct Costs (\$30 x 100hrs)	\$3,000
Indirect Costs (\$54 x 75hrs)	<u>\$4,050</u>
 Total Intramural Costs	 \$7,050

**TOTAL SITE BUDGET** \$100,315

**Attachment I**  
**ENFORCEMENT SUMMARY**

On April 16, 1990, I contacted the EPA Office of Criminal Investigation (OCI) concerning the status of the criminal investigation of potential responsible parties (PRP) for the drums at the Montreal Court site. The OCI requested that the EPA Emergency Response and Removal Branch delay notifying PRP's until after OCI has completed its investigation because communication with PRP's would jeopardize the ongoing criminal investigation. PRP's will be pursued for cost recovery after the OCI investigation is concluded.

### C. Project Schedule

The Delivery Order will be issued when the Action Memorandum is approved. Project duration is estimated to be five (5) days with on-site work beginning May 23, 1990 and completed May 27, 1990. Disposal will be completed by August 10, 1990.

### D. Consistency with Remedial Plan

N/A-Site is not listed on the NPL.

### RECOMMENDATIONS

Because conditions at the Montreal Court Drum site meet the National Contingency Plan Section 300.415(b) and CERCLA 104(c)(1)(C) criteria for a removal action, I recommend your approval of the proposed action. The estimated total project ceiling is \$100,315 of which \$72,500 are for extramural cleanup contractor costs.

## **I. INTRODUCTION**

### **A. Site Background/Site History**

The property located on Montreal Court in Tucker, DeKalb County, Georgia is located in an industrial area of the county. The property was leased by the owner to an individual who used the property as a drum storage area. As a result of the property owner's complaints and inquiries, the Environmental Protection Agency's National Enforcement Investigation Center (NEIC) was investigating the site.

An initial site investigation was performed by TAT in January 1990, which revealed the presence of thirty-five 55-gallon drums on site. (TAT Document #04-F-03861). The majority of the drums were stored on pallets and all of the drums showed signs of weathering. Many of the drums were open top drums and six were empty. A few of the drums were stored on their sides and some of the drums had leaked as was evidenced by the discolored soil in the drum storage area. While on site, TAT created drum #36 by depositing a small amount of heavily contaminated soil in the drum. The soil appeared to have been contaminated by the leaking of drum #29, which was empty and laying on it's side. Sampling of the drums by TAT revealed the presence of a variety of materials in the drums, including heavy metals, volatiles, flammables, oxidizers and chlorinated organics. In conjunction with the on-going criminal investigation of the responsible party(ies), the EPA Emergency Response Branch initiated

a fund-lead removal action in May 1990, to curtail the imminent threat from the hazardous materials present on the site.

## **II. PHASE I - SITE CHARACTERIZATION**

### **A. Site Investigation**

On 23 May 1990, EPA mobilized ERCS and TAT to Montreal Court Drum Site to re-sample the drums for compatibility testing and to establish waste streams for disposal. Upon completion of drum inventorying, ERCS sampled all of the drums, including drum #36. Due to the fact that six of the drums were empty, ERCS completed the sampling of only thirty drums. (Attachment D - Photographs). The samples were analyzed for disposal parameters by Ecotek Laboratory Services Incorporated in Atlanta, Georgia. (Attachment C - Analytical Data).

## **III. PHASE II - REMOVAL ACTION**

### **A. Removal, Transportation and Disposal of Waste Streams**

From the initial field characterization and compatibility analysis performed on the samples taken by TAT in January 1990, it was determined which drums contained hazardous materials. Only the twelve drums containing hazardous materials were removed from the site.

On 30 May 1990, EPA mobilized ERCS and TAT to the site to overpack nine drums that were in one compatible waste stream, according to the analytical testing. This waste stream contained the flammable

liquids, the oxidizers and the hexane soluble liquids. The drums that were in this particular waste stream, or Wastestream 1, were drums # 3, 4, 6, 7, 9, 10, 24, 32 and 33. During this particular site visit, the OSC and TAT found one 30-gallon drum of a liquid that appeared to be waste oil on the site property, also. This drum had not previously been present on the site. This drum was numbered 38 and was sampled and overpacked along with the other nine drums. The analysis of the sample confirmed that the sample was a petroleum product.

On 6 July 1990, EPA mobilized ERCS and TAT to the site to monitor the removal of the nine drums which made up Wastestream 1. The removal of the nine drums was carried out by MKC Enterprises, Incorporated of Doraville, Georgia. Approximately 3000 gallons of waste flammable liquids were removed by MKC from the site on this individual day.

On 27 September 1990, EPA mobilized ERCS and TAT to the site to remove the remaining three hazardous drums. Unfortunately, due to miscommunication and confusion between the ERCS contractor and MKC Enterprises, Incorporated, the removal of the final two wastestreams was temporarily delayed.

On 4 October 1990, EPA mobilized ERCS and TAT to the site for the final removal process. ERCS overpacked drums #11 and #34, which contained approximately 110 gallons of waste flammable liquids with high levels of cadmium. These two drums, or Wastestream 2, were removed by MKC, also. In addition, drum #38, which contained

approximately 30 gallons of petroleum distillates was also removed by MKC during this visit. ERCS and TAT demobed from the site concluding the removal at Montreal Court Drum Site.

## UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

### REGION IV

345 COURTLAND STREET, N.E.  
ATLANTA, GEORGIA 30365

#### ACTION MEMORANDUM

DATE: MAY 04 1990

SUBJECT: Removal Action Authorization for the Montreal Court Drum Site, Tucker, Georgia.

FROM: Steve Spurlin  
On-Scene Coordinator

TO: Patrick M. Tobin, Director  
Waste Management Division  
EPA Region IV

#### PURPOSE

This memorandum is for authorization to proceed with the removal action at the Montreal Court Drum Site in Tucker, Georgia. A significant threat to the public health and the environment exists at this time, and may worsen if response is delayed. The total cost of the project is \$100,315.

#### BACKGROUND

##### A. Site Setting/Description

The site is located at 1804 Montreal Court, Tucker, Georgia. The site is generally open field, with several small businesses, including a body shop, shipping company, and well-drilling operation located in close proximity.

In December 1989, representatives from the EPA Office of Criminal Investigation (OCI) requested the EPA Emergency Response & Removal Branch to respond to the site to investigate and identify any hazards associated with thirty-five (35) abandoned drums.

##### B. Quantity and Types of Substances Present

Thirty-five fifty-five gallon drums were found at the site on January 10, 1990. Technical Assistance Team (TAT) personnel under level B protection examined the drums and report that many drums were open top and in various stages of deterioration. TAT performed a site assessment that included drum sampling for compatibility analysis. Subsequently, when all drums were sampled the On-Scene Coordinator selected three drums to be resampled to be sent to the EPA Environmental Services Division laboratory for Target Compound List (TCL) analysis.

Several drums could not be sampled due to insufficient volumes in the drums or the material was solidified. Of the 35 total drums on-site; 26 were sampled; 2 could not be sampled; and 7 were empty. One drum was empty and had spilled its contents on the ground.

Sample analysis confirmed the presence of the following hazardous substances in the concentrations set forth:

<u>SUBSTANCE</u>	<u>LEVEL</u>
Toluene	17,021 ppm
Ethylbenzene	6,526 ppm
Tetrachloroethene	1,147 ppm
Total Xylenes	3,944 ppm
1,1,1-Trichloroethane	156 ppm
Phenol	1,300 ppm

C. The site is not on the NPL.

**THREAT**

A. Threat of Exposure to Public or the Environment

The site is in an unsecured open area. Due to the sites' close proximity to other businesses the potential exists for human exposure via direct contact with the material. Also, four drums contain flammable liquids which pose a potential fire and explosion hazard.

The site has no release containment. Should a release occur, soil, groundwater, and surface water could be adversely effected.

B. Evidence of Extent of Release

Several drums were open and could be discharging hazardous material when rainwater displaces the drum contents. One drum had spilled its contents on the ground. Also, when conducting a follow-up site visit to inspect the condition of the drums, EPA observed that another drum appeared to have leaked a small amount of an oily substance. The drums remain unprotected from environmental exposure and continued deterioration of their integrity through exposure will result in an increased chance of a release.

**C. Actions Taken to Abate Threat**

There have been no previous actions to abate the threat.

**D. Current Actions to Abate Threat**

There are no current actions to abate the threat posed by this site, and none are anticipated should this action be disapproved.

**ENFORCEMENT**

See Attachment I

**PROPOSED ACTIONS AND COSTS**

**A. Objectives of the Project**

The objectives of this project are to repackage, remove, and dispose of all drums found to contain hazardous substances at the Montreal Court site. The drums will be disposed of at an approved hazardous waste facility.

**B. Project Costs**

**Extramural Costs**

Cleanup Contractor Costs	\$72,500
TAT Costs	\$ 8,600
15% Contingency	<u>\$12,165</u>
 Total Extramural Costs	 \$93,265

**Intramural Costs**

Direct Costs (\$30 x 100hrs)	\$3,000
Indirect Costs (\$54 x 75hrs)	<u>\$4,050</u>
 Total Intramural Costs	 \$7,050

**TOTAL SITE BUDGET** \$100,315

**Attachment I**

**ENFORCEMENT SUMMARY**

On April 16, 1990, I contacted the EPA Office of Criminal Investigation (OCI) concerning the status of the criminal investigation of potential responsible parties (PRP) for the drums at the Montreal Court site. The OCI requested that the EPA Emergency Response and Removal Branch delay notifying PRP's until after OCI has completed its investigation because communication with PRP's would jeopardize the ongoing criminal investigation. PRP's will be pursued for cost recovery after the OCI investigation is concluded.

### C. Project Schedule

The Delivery Order will be issued when the Action Memorandum is approved. Project duration is estimated to be five (5) days with on-site work beginning May 23, 1990 and completed May 27, 1990. Disposal will be completed by August 10, 1990.

### D. Consistency with Remedial Plan

N/A-Site is not listed on the NPL.

### RECOMMENDATIONS

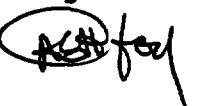

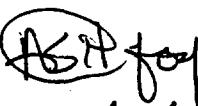

Because conditions at the Montreal Court Drum site meet the National Contingency Plan Section 300.415(b) and CERCLA 104(c)(1)(C) criteria for a removal action, I recommend your approval of the proposed action. The estimated total project ceiling is \$100,315 of which \$72,500 are for extramural cleanup contractor costs.

You may indicate your approval or disapproval by signing below:

**MEMORANDUM**

TO: File *KSP*

FROM: Donnissa Duvic  
TAT, Region IV

THRU: Conley B. Phifer *(CP)*  
TATL, Region IV

SUBJECT: Montreal Court Analytical Data  
TDD #04-9001-L02-0868  
TAT #04-F-03845

DATE: 1 March 1990

Accura Analytical Laboratory conducted the requested compatibility study on the twenty nine submitted samples and subsequent analyses of the seven groups of composited samples from the Montreal Courtsite.

The final data package was received one day late and a penalty of three percent was incurred against the total invoice.

Phase I of the analyses consisted of a compatibility study comprised of the following tests conducted on each of the submitted samples: 1)air/water reactivity, 2)water solubility 3)hexane solubility, 4)peroxide 5)oxidizer, 6)pH, 7)Chlorinated organics 8)sulfide, 9)cyanide, 10)flash point, and 11)PCBs.

The results for each of these tests have been compiled and are enclosed.

Compatible samples were composited into seven different groups:

- Group 1 - Flammable Liquids; D04, D10, D16A, D06
- Group 2 - Water Soluble Liquid; D02, D13, D16, D17, D18, D19, D20, D22, D25, D35
- Group 3 - Water Soluble Solids; D01, D08, D12, D14, D15, D31, D36
- Group 4 - Hexane Soluble Solid; D05
- Group 5 - Hexane Soluble Liquid; D03, D13A, D33
- Group 6 - Chlorinated Organics; D07, D09, D32
- Group 7 - Oxidizer; D24

Roy F. Weston, Inc.

MAJOR PROGRAMS DIVISION

In Association with ICF Technology, Inc., C.C. Johnson & Malhotra, P.C., Resource Applications, Inc., and R.E. Sarriera Associates

The composited samples were then subjected to TAL/HSL analyses consisting of volatiles, semivolatiles, pesticides, PCBs and metals. Two of the groups also underwent an incineration profile consisting of the following parameters:

- |                        |  |
|------------------------|--|
| 1) color               | 10) ash content  |
| 2) odor                | 11) chlorine content   |
| 3) # phases            | 12) bromine content  |
| 4) physical state      | 13) iodine content   |
| 5) % by vol. of phases | 14) sulfur content   |
| 6) flash point         | 15) for the sludge/solid:<br>% Free liquids by the<br>Paint Filter Test SW-846.9095<br>Total Solids - Std Method 209 |
| 7) viscosity           |  |
| 8) density             |  |
| 9) BTU content         |  |

The results for each of these tests have been compiled and are enclosed.

Several compounds have been flagged with an "E" to designate that the reported concentrations are only estimates due to the detected values greatly exceeding the calibration limit. The laboratory did not reanalyze the samples at a different calibration limit to confirm the concentrations, therefore, these values should be viewed with discretion.

The spike recoveries for 2-Bromo-1-Chloropropane, 1,4-Dichlorobutane and Phenol-D6 were found to be outside QC limits.

The spike recoveries for antimony, arsenic and beryllium were found to be slightly lower than the 80 - 120 % normal QC limit.

February 13, 1990

Mr. Shaker Reddy  
Accura Analytical  
2690 Ponce de Leon Ave.  
Decatur, GA 30030

Montreal Drums  
TDD# 04-9001-L02-0868  
TAT# 04-F-03756

Dear Mr. Reddy:

This letter will serve as written confirmation of the verbal agreement made via telephone on February 13, 1990 regarding the terms for analyses of twenty-nine samples for Roy F. Weston, Inc., Major Programs Division, on behalf of our client, the U.S. Environmental Protection Agency.

The samples will be analyzed for the following parameters utilizing the test methods specified below.

\* Composite samples into the following groups:

Group 1 Flammable Liquids: D04, D10, D16A, D06

Group 2 Water Soluble Liquid: D02, D13, D16, D17, D18, D19, D20, D22, D25, D35.

Group 3 Water Soluble Solids: D01, D08, D12, D14, D15, D31, D36

Group 4 Hexane Soluble Solids: D05

Group 5 Hexane Soluble Liquid: D03, D13A, D33

Group 6 Chlorinated Organics: D07, D09, D32

Group 7 Oxidizer: D24

- \* Composited samples will undergo a full TAL/HSL analyses consisting of VOA, BNA, Pesticide, PCB and metals, at a cost of \$1150.00 each.
- \* Groups #1 and #6 will also undergo an incineration disposal profile at a cost of \$220.00 each. The profile will include the following parameters:
 

1. Color	10. ASH Content
2. Odor	11. Chlorine Content
3. # Phases	12. Bromine Content
4. Physical State	13. Iodine Content
5. % by Volume of Phases	14. Sulfur Content
6. Flash Point	15. For the Sludge/Solid: % Free Liquids by the Paint Filter Test SW-846 9095
7. Viscosity	
8. Density	
9. BTU Content	Total Solids - STD. Meth. 209
- \* QA/QC is to include a laboratory blank, matrix spike and matrix spike duplicate on the TAL/HSL fraction on the analyses and standards where applicable on the disposal profile, at a total cost of \$1150.00.

The detection limits for these parameters will be those specified in the test methods utilized for analysis.

The turnaround time of 14 calendar days is sufficient for the receipt of written analytical results which will include the requested QA/QC package due no later than February 28, 1990. However, delays in the submission of the written analyses will result in a 3% reduction of the total charge for the analyses, for the first day beyond the turnaround time. An additional 2% reduction of the total charge for the analyses will occur if the results are delivered two days beyond the turnaround time. For delays occurring on the third day and beyond, an additional 1% reduction of the total charge per day will occur. In addition, please be aware that your firm is responsible for the ultimate disposal of all samples submitted to you.

The turnaround time begins with the date that a representative from your company signs the chain-of-custody record accompanying the samples. However, if the receipt of samples is after 10:00 a.m., the turnaround time will begin on the following day.

Please have an authorized representative of your company sign the signature line below, indicating that Accura Analytical agrees to the terms set forth in this letter. This must be signed by an individual empowered to bind the company. Please return this letter with the analytical results and retain a copy for your records.

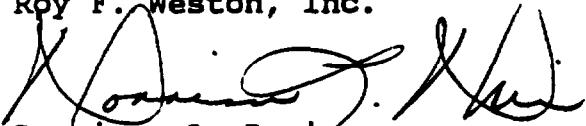

If you require additional information on this sampling project, please contact me at (404) 352-4147.

Sample Description: Lab Blank

Date Report: 2-28-90

Date Sample Rec'd: 1-11-90

COMPOUND	UNITS: (ppb)	Q
Chloromethane	5	U
Bromomethane	5	U
Vinyl Chloride	5	U
Chloroethane	5	U
Methylene chloride	5	U
Acetone	5	U
Carbon Disulfide	5	U
1,1-Dichloroethane	5	U
1,1-dichloroethane	5	U
(Total) 1,2-Dichloroethane	5	U
Chloroform	5	U
1,2-Dichloroethane	5	U
2-Butanone	5	U
1,1,1-Trichloroethane	5	U
Carbon Tetrachloride	5	U
Vinyl Acetate	5	U
Bromodichloromethane	5	U
1,2-Dichloropropane	5	U
Cis-1,3-Dichloropropene	5	U
Trichloroethene	5	U
Dibromochloromethane	5	U
1,1,2-Trichloroethane	5	U
Benzene	5	U
Trans-1,3-Dichloropropene	5	U
Bromoform	5	U
4-Methyl-2-Pentanone	5	U
2-Hexanone	5	U
Tetrachloroethene	5	U
1,1,2,2-Tetrachloroethane	5	U
Toluene	5	U
Chlorobenzene	5	U
Ethylbenzene	5	U
Styrene	5	U
Total Xylenes	5	U

# ACCURA ANALYTICAL LABORATORY

*Environmental Analytical Services*

2690 E. Ponce de Leon Avenue, Decatur, GA 30030/PO Box 1382, Decatur, GA 30031 (404)378-3877

(Q) : Qualifiers

O : Estimated value, over calibration Limit

U : Analyzed for but not detected

B : Found in associated blank as well as sample

J : Estimated value, less than quantitation limit

MONTRÉAL  
Court

Client: OHM

Sample Receipt Date: July 5, 1990

LSDG: 0190

Sample Report Date: July 19, 1990

Client Reference No.: Montreal #2

#### ANALYTICAL RESULTS

Lab Sample ID Client Sample ID	019001 MCD-2 LIQUID	019002 D11 / D34 Solids composit.
METALS (mg/kg)		
Arsenic	<5.4	<5.6
Selenium	<4.9	<5.1
Barium	967.	<0.9
Cadmium	171.	<0.5
Chromium	1.0	<0.8
Lead	2.5	12.0
Mercury	<0.07	<0.08
Silver	<1.0	<1.0
Copper	<0.5	0.9
Iron	75.3	912.
Manganese	11.3	2.2
Nickel	<3.3	<3.4
Potassium	<34.8	<36.2
Thallium	<7.4	20.4
Sodium	57.7	120.
Zinc	142.	12.0

Cyanide	0.14	<1.20
Flashpoint °F	203.	144.
Density (g/ml)	2.19	0.51
pH	6	5
% solids	15.6	83.1
Physical Description Color	Light Brown	Blue
Physical Description Odor	Yes	Yes
Physical Description # Phases	2	1
Physical Description State	Liquid	Solid
Physical Description % by Volume Liquid	90%	100%
Physical Description % by Volume Solid	10%	0%

Client: OHM

Sample Receipt Date: July 5, 1990

LSDG: 0190

Sample Report Date: July 19, 1990

ROY F. WESTON/SPER. DIV.  
1575 NORTHSIDE DRIVE N.W.  
ATLANTA, GEORGIA 30318

Montreal Drum Site

TDD# 04-9001-c8

RCS  
2987

10 January 1990

0745 ATATZ McKeen, TATM Cole and Benfield leave Atlanta TAT Office for Montreal Drum Site, DeKalb County, Georgia. PCS #2987. Directions to Site:  
from TAT Office on Northside Drive -

I-85N to Chamblee-Tucker Road.  
Go East on Chamblee-Tucker Road..which becomes Mercer Road. Follow to end.  
Turn right onto Henderson Mill Road.  
Follow Henderson Mill Road until it becomes Briarcliff Rd. Turn right onto LAVISTA Road.(Rt. 236) Turn left onto Montreal Road. Approximately  $\frac{1}{2}$  mile on the left, immediately after railroad tracks is Montreal Circle. Follow road to the end. Turn left onto Montreal Ct.  
Site is at the far end of the road.

0830 TATM McKeen, Benfield and Cole arrive on site. Vicki Benfield

0835 TAT met with OSC's Hinchcock & Spaulin and National Enforcement Investigation Center (NEIC) Representatives Dick Warner and Barry Stark. THE SITE IS AN ENFORCEMENT AND CRIMINAL INVESTIGATION SENSITIVE. MADE AN INITIAL ASSESSMENT OF THE SITE FROM PERIMETER - 35 DRUMS IN VARIOUS CONDITION ARE SCATTERED THROUGHOUT THE PROPERTY. SOME HAVE LIDS AND SOME ARE LYING ON THEIR SIDES.

0900 SPECIFIC INSTRUCTIONS FROM OSC HINCHCOCK CONCERNING SAMPLING WAS TO OBTAIN 1 SAMPLE FROM EACH DRUM

AND PLACE INTO AN 8 oz JAR FOR COMPATIBILITY ANALYSIS. THEN AFTER ALL SAMPLES WERE TAKEN THE OSC WOULD CHOOSE 3 SAMPLES (DRUM) WHICH WOULD BE RESAMPLED IN 18 OUNCE & 2-40 ml VIAL FOR A TARGET COMPOUND LST ANALYSIS AT THE ESD LAB IN ATLANTA, GA. THESE WOULD BE CHOSEN ON THE BASIS OF HIGH READINGS FROM MONITORING WITH THE OVA & HNU TRACE ORGANIC ANALYZERS. ADDITIONALLY AND DRUM CONTENTS HAVING A pH < 2.0 or > 12.5 WOULD ALSO BE SAMPLED FOR ATLANTA, GA. (TCL ANALYSIS).

1000 TAT MCKEEN, BENFIELD, & Cole Dressed in Level 'B' PPE AND COMMENCED WITH INITIAL ENTRY WITH OVA, RAD METER AND EXPLORIMETER FOR PRELIMINARY AIR MONITORING RUN. Note: CALIBRATED INSTRUMENTATION ON SITE WITH PROPER CALIBRATION GAS BEFORE ENTRY.

OSC HITCHCOCK DEPARTED THE SITE DUE TO OTHER EPA REGIONAL COMMITMENTS. OSC SPURGE RESUMED AS OSC.

1030 TAT MCKEEN & Cole MADE LEVEL 'B' ENTRY TO SAMPLE FIRST DRUM WHILE TAT BENFIELD ON BACKUP. OBTAINED 1<sup>ST</sup> SAMPLE WITH GLASS DRUM TAFF AND PUT INTO 8 oz WIDE MOUTH GLASS JAR. TO PREVENT CROSS-CONTAMINATION - NEW, CLEAN DRUM TAFFS WERE UTILIZED FOR EACH DRUM AND ALSO FRESH SURGICAL GLOVES WERE CHANGED BETWEEN SAMPLES. EACH SAMPLE AND DRUM WAS DOCUMENTED ON INDIVIDUAL DRUM LOG WHICH INCLUDES TIME TAKEN, CONTENTS OF

D36.

Soil left at 60cm from D29 and sequence  
No. 47 vertical and slope (6) material

1730 Took New 55cm 17-H drum

1800 PAT THEN COVERED ALL DRUMS WITH  
VLS QUEEN AND PLACED BANNER BUNS  
AROUND THEM.

1815 BEGAN DECANTATION AND CLEANING  
AND PREPPING SAMPLES FOR SHIPMENT. PAT  
AND OSC COMPLETED CLEAN-UP-CUSTODY  
AND CUSTODY SEALS ON ALL SAMPLES AS  
PER EPA SOP. SAMPLES PLACED INTO  
1 GALLON MINT CANS WITH REINFORCER  
FOR SHIPMENT TO CAP.

IN ALL 29 SAMPLES OBTAINED FOR  
COMPATIBILITY (8 OZ).

3 DRUMS (D10, D32, D33) SELECTED  
FOR SAMPLING IN 16 OZ JAR, 2-40 ml VIAL  
FOR TARGET COMPOUND LIST AND THESE  
WERE SELECTED BASED ON ELEVATED ORGANIC  
VAPOR READINGS AND FINAL SELECTION APPROVED  
BY OSC WEBSTER.

2010 COMPLETED SAMPLING PACKAGING  
AND ALL PERSONNEL OFF SITE.

2045 PAT ARRIVED BACK AT ATLANTA  
PAT OFFICE TO UNPACK EQUIPMENT. SAMPLES  
STORED IN LOCKED EQUIPMENT ROOM IN COOLER  
ON ICE UNTIL FINAL LABORATORY ANALYSIS  
TOMORROW.

25 April 90.

- 0830 Tat member Dunbar and Legault report the Tat office Enroute. Montreal Court drum site.
- 0915 Tat arrived on site and observed that most of the drum were uncovered and need recovering. Tat calibrated the CGI and HNU-Pid.
- 0930 Both tats Dressed out in level "C" PPE with Gmc-H type Respirator cartridges. Tat carried out entry into the drum areas and conducted real time air monitoring around and above the drum opening. No reading above background were obtained outside the Head space or just outside the drum openings. Tat carried out photo documentation.
- 0948 Tat began recovering the drums with the Visqueen at the site. Most of the previously used visqueen was torn and in good condition which contrary to wind and/or weather removing the Visqueen covered.
- 1010 Tat complete recovering the Drums and continue photo documentation.
- 1015 Tat Dressed down from level "C" and began securing equipment for departure.
- 1030 While removing the film from the camera, it was observed that the camera may have mechanically fail and the quality of the the photos was uncertain.

25 April 90.

1100 TAT had demobilized from the site  
and OSC Spurlock was notified  
of site activities.

25 April 90.  
Spurlock

23 May 1990

- 1130 TAT Benfield leaves Hatch TAT Office  
for site to meet ERCS crew #8 —  
resample drums for disposal options.
- 1200 Arrive on-site. ERCS crew is on-site.  
TAT discusses safety with crew and  
tells them of the previous visit. RM —  
Paul Street and Division Manager —  
Dave Lee, TAT discuss drum logs —  
that were taken at previous site.  
ERCS prepares to go in and —  
sample the drums in Level C with  
drum logs in hand. Will be careful —  
and watch closely for breakthrough.
- 1230 ERCS crew of 3 samplers goes in —  
with 2 others remaining out to  
prepare sampling equipment and —  
sampling transporting equipment.
- 1300 RM Street splits open Drum #11 because —  
it will not open with drum bungs.
- 1330 Drum #37 is a blue, empty drum. Drum —  
#36 is full of rainwater. Drum #36,  
which contains soil / sludge that was —  
contaminated from Drum #29, has a —  
PCB label on it which has an 'X' through —  
the label. ERCS continues to sample —  
the drums and find all numbered drums.
- 1345 ERCS crew begins covering drums —  
individually with Visqueen and securing —  
them with duct tape. Also, put out —  
"Caution" yellow tape around the entire —  
area.
- 1400 ERCS crew completes sampling of drums.

The area has 3 drums in a small  
cavine. 2 drums appear to be a female  
and female, the other is a male  
Napa, the others is called  
Maraca, (espectation. ASC down  
sets one up right the is looking  
difficult. The fastest concert  
wishes. A number in the area. It is

1480 OSC groups with 1-11 Shout-having the  
day's words and the necessary for  
a quick response to the drums.  
Groups RnB Shout-waiting till the next card  
cons of developing your drums before  
building viruses that break-down - 13  
Developing virus that break-down -  
very important idea. In study circumstances  
of communication introduce gradually  
the individual drummer. OSC you can  
call's with T. Wawa to discuss the  
major public differences between  
the Q publics.

1460 QRC's continuing labeling and labeling  
samples.

155 TH, ASC group out EM direct Aid  
over to the best one of the quality to  
last at our level who can help

spend some drums who like looking  
for the site.

1400 Club - Up samples for packaging for  
transportation of the laboratory. However  
the old 10121 were left.

a milky-white color with a soapy-- appearance. OSC Spurlin states that it appears/looks like a latex product. RM Street states that at 1200 hrs, when OTM first spotted the drums, the water was clear and didn't have the appearance that it currently has. We walk up the stream about 500 yds and are unable to find the source. OSC Spurlin says that he will follow-up on this problem.

1545 Return to the site of the drums and talk about returning to the site on 29 May 1990 (Tuesday), to overpack the drums. ERCS Crew, TAT Beaufield and possibly OSC Spurlin will return early Tuesday morning to the site. ERCS completed labeling of samples. RM Street tells OSC Spurlin that they (ERCS crew) brought 2 extra people for training purposes and that the 2 people will not be chargeable to today's 1900-55s. OSC Spurlin says that this is fine.

1600 TAT, OSC, ERCS depart site.

~~Kicki  
23 May 1990  
Beaufield~~

30 May 1990

0922 TNT arrives on-site. ERCS crew is setting up area in preparation for overpacking of drums. Dry Street states that the back-hoe trailer has a flat tire and that they are waiting for a man from Hillsboro to come out to the Corvington Shop to fix it.

1000 After brief safety meeting held, the ERCS crew of TC O. Todd Robinson, RT Jeff Shattock and PT Travis dress in Level C PPE to get started on loading the 9 drums that will be overpacked and readying the drum logs for those particular drums only. The backhoe is supposed to arrive by 1100 hrs.

1015 Robinson and Shattock go in level C - PT. Begin the new drum logs - 1045 PT Travis goes in to help - Dry Street calls shop to check on the backhoe which should arrive at 1100. ERCS crew continues overpacking and making new drum logs.

1115 ERCS crew comes out of Level C - and takes a short break. Dry Street on backhoe still. ERCS crew fills out formal drum logs on the 9 drums. Nichols arrives via Hertz rental truck. Dry Street discusses the necessity of sending one crew member to HVB - Denarville to pick up the bungs/rings. Drums from a wholesale seller to

1143 Dry Street discusses the necessity of sending one crew member to HVB - Denarville to pick up the bungs/rings. Drums from a wholesale seller to

OSC drum and the second old box car  
that is on-sights. This particular drum  
comes to be used as the first drum but  
the property of the dull drum  
bus system (bus system) OSC double decker bus  
TNT / buried to call the structure the  
elite and poor removed out with  
drumming equipment so BSCS can  
also said drum removed from the wood  
X-shaped, aquaplaning of the drum  
OSC power elements of fuel off  
first, suspended for the drum all  
OSC suspension of SCS of which  
the method and to have the third  
the (acoustic and overpack the drum  
of 61 (3D action drum)

Creek that runs behind the 2 buildings at the North end of the property. The Creek has 3 drums in it that appear to contain Petrokun products. RM Street and E.C. Robinson upright the drums on the bank of the stream to keep them from leaking. Other 2 ERCS men cover the remaining drums with tarp, Visqueen and secure them with duct tape.

1300 HAT McLean arrives with sample set for ERCS to sample drum. RM Street and E.O. Robinson sample drum and overpack it while other 2 ERCS crew members start to pack up the equipment.

1345 ERCS crew completes overpacking drum. Staging, securing the area with "MUTT" tape and packing up their equipment. RM Street contacts HERZ Dentzel to pick up the truck.

1400 ERCS crews off-site. RM Street is to deliver sample to laboratory.

1415 HAT off-site after completing log book and taking pictures.

#### Accomplishments:

Overpacked drums #9  
Repacked new drum. Sampled newly found drum.

✓ 5/30/98 / Benfield

JULY 6, 1990

0815 TAT MCKEEN ON SITE TO DOCUMENT THE REMOVAL OF THE DRUMS OFF SITE FOR FINAL DISPOSAL. ALL DRUMS APPEAR TO BE SECURE.

0845 OHM CORP Project Manager, JEFF GOTKNECHT, ARRIVED ON SITE.

0900 MKC ENTERPRISE, INC. ARRIVED ON SITE WITH BX TRUCK AND 2 PERSONNEL TO HAUL AWAY DRUMS.

0905 OSC SPUNN ON SITE TO DIRECT REMOVAL OF THE DRUMS AND COORDINATE THE REMOVAL OF THE EIGHT NUMBERED DRUMS.

AT THIS POINT ONLY NINE DRUMS DRUM HAVE BEEN DETERMINED TO BE HAZARDOUS AND THIS TAKEN TO MKC TSD FACILITY.

0915 MKC COMMENCED TO LOAD UP DRUM NUMBERS #3, #6, #4, 10, 24, #9, 32, 33, 7. DRUMS ARE Labeled FLAMMABLE LIQUID (D001) UN 1993.

0945 ALL DRUMS LOADED AND SECURED INTO TRUCK. OSC SIGNED UNIFORM HAZARDOUS WASTE MANIFEST NUMBER 90098 FOR SHIPMENT TO MR MKC TSD IN DORAVILLE UNTIL FINAL DISPOSAL MANAGEMENTS ARE MADE.

1000 ALL PERSONNEL OFF SITE.

SAMPLING: CONDUCTED? YES X NO \_\_\_\_\_

If Yes, Describe Sampling Method Light colored wood was sampled with electric planer while wood matches were applied to new panels. All items were placed in individual containers for analysis. Three of the items selected by the OK were sampled for RL analysis and found to be 100% compliant.

Has Lab Been Notified of Potential Hazard Level? Yes X No    NA   

Note: This Health and Safety Plan was prepared for work to be conducted under the Technical Assistance Team (TAT) Contract 68-01-7367 Zone 1. Use of this plan by WESTON and its subcontractors on the TAT contract is intended to fulfill the OSHA requirements found in 29 CFR 1910.120. Items not specifically covered in this plan are included by reference to 29 CFR 1910 and 1926.

I have read and understand this safety plan.

# JOB SAFETY & HEALTH PROTECTION

The Occupational Safety and Health Act of 1970 provides job safety and health protection for workers by promoting safe and healthful working conditions throughout the Nation. Requirements of the Act include the following:

## Employers

All employers must furnish to employees employment and a place of employment free from recognized hazards that are causing or are likely to cause death or serious harm to employees. Employers must comply with occupational safety and health standards issued under the Act.

## Employees

Employees must comply with all occupational safety and health standards, rules, regulations and orders issued under the Act that apply to their own actions and conduct on the job.

The Occupational Safety and Health Administration (OSHA) of the U.S. Department of Labor has the primary responsibility for administering the Act. OSHA issues occupational safety and health standards, and its Compliance Safety and Health Officers conduct job site inspections to help ensure compliance with the Act.

## Inspection

The Act requires that a representative of the employer and a representative authorized by the employee be given an opportunity to accompany the OSHA inspector for the purpose of aiding the inspection.

Where there is no authorized employee representative, the OSHA Compliance Officer must consult with a reasonable number of employees concerning safety and health conditions in the workplace.

## Complaint

Employees or their representatives have the right to file a complaint with the nearest OSHA office requesting an inspection if they believe unsafe or unhealthy conditions exist in their workplace. OSHA will withhold, on request, names of employees complaining.

The Act provides that employees may not be discharged or discriminated against in any way for filing safety and health complaints or for otherwise exercising their rights under the Act.

Employees who believe they have been discriminated against may file a complaint with their nearest OSHA office within 30 days of the alleged discrimination.

## Citation

If upon inspection OSHA believes an employer has violated the Act, a citation alleging such violations will be issued to the employer. Each

## More Information

Additional information and copies of the Act, specific OSHA safety and health standards, and other applicable regulations may be obtained from your employer or from the nearest OSHA Regional Office in the following locations:

Atlanta, Georgia  
Boston, Massachusetts  
Chicago, Illinois  
Dallas, Texas  
Denver, Colorado  
Kansas City, Missouri  
New York, New York  
Philadelphia, Pennsylvania  
San Francisco, California  
Seattle, Washington

Telephone numbers for these offices, and additional area office locations, are listed in the telephone directory under the United States Department of Labor in the United States Government listing.

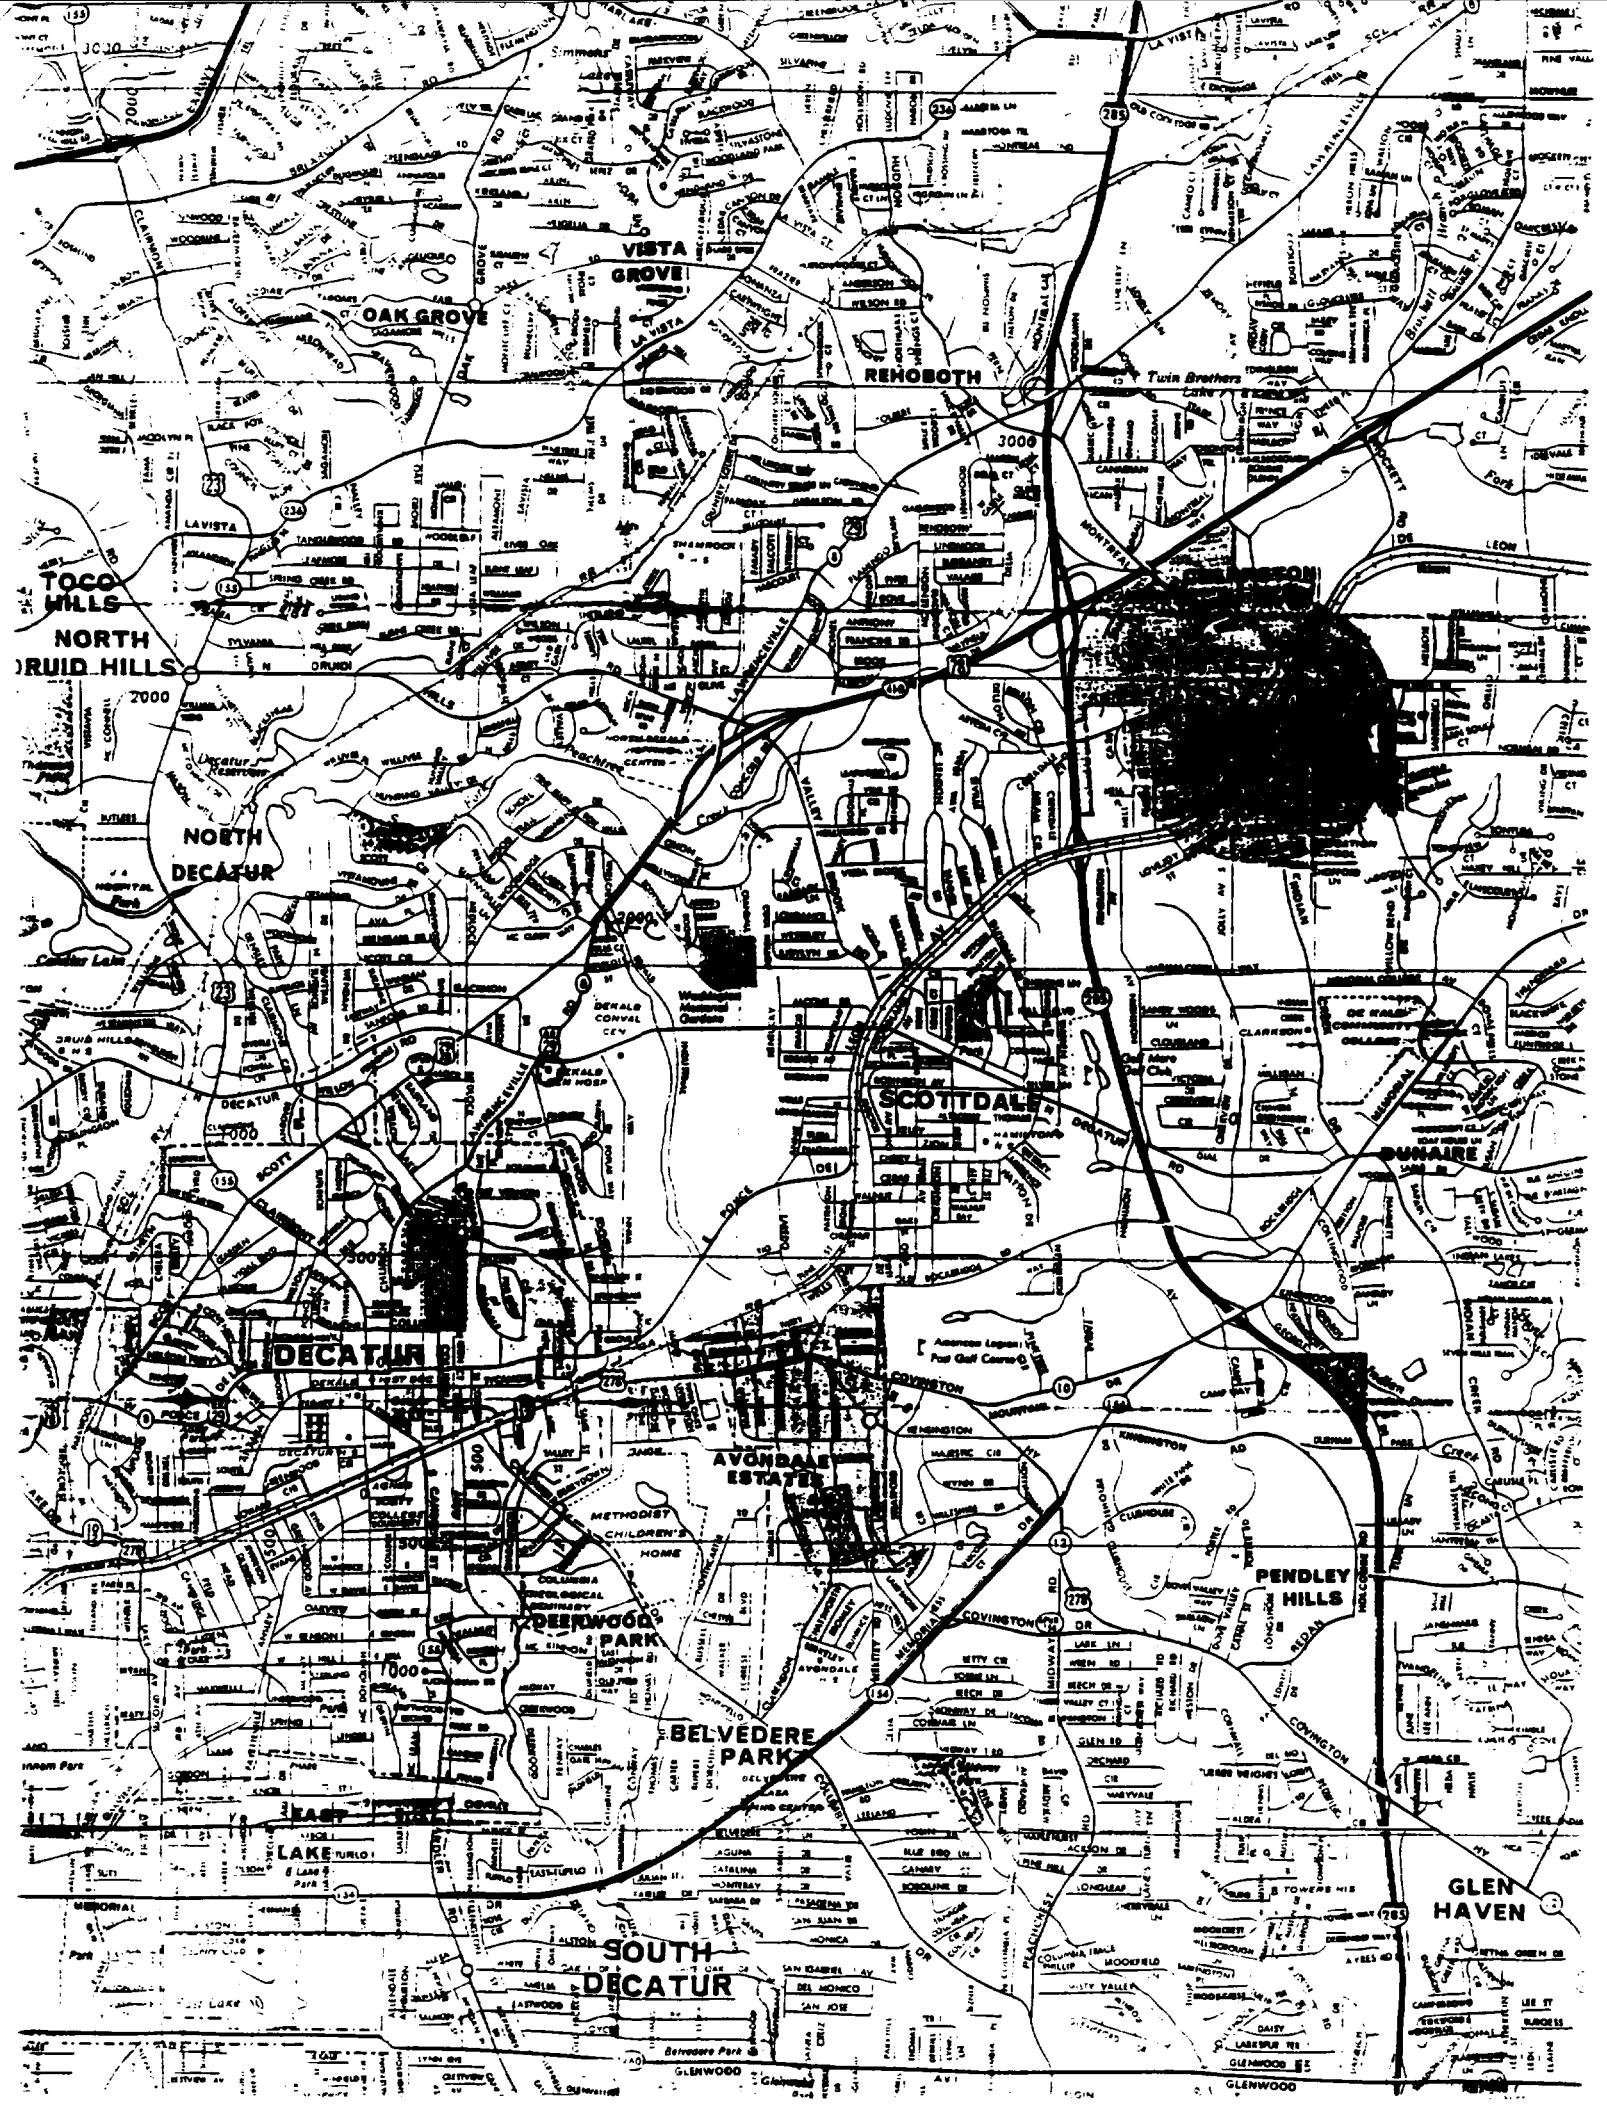

Washington, D.C.
